

Q1) What is DOM?

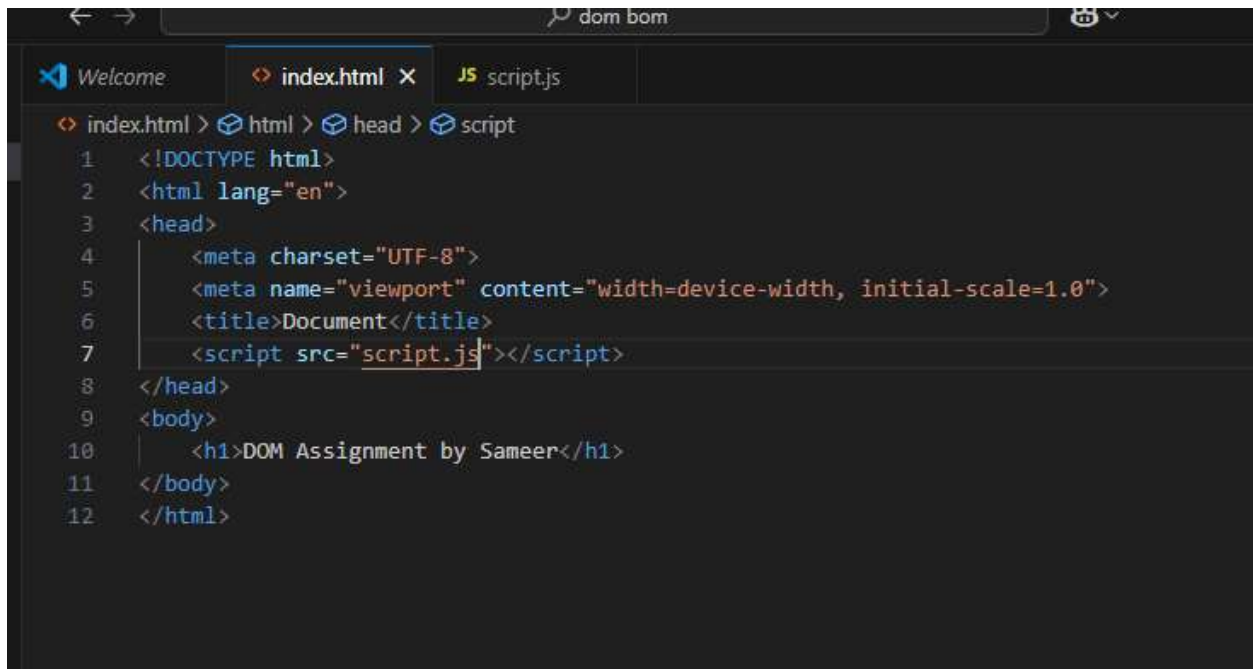

Documents object model (DOM) HTML ky documents ko access karne ky lie use hota hai. Ye ek programming interface hai Jo documents ky lie use hota hai. Ye ek tree like structure ki sorat me documents ky structure ko zahir karta hai. Jisse developers ko documents ky attributes, element, or content ko manipulate or interactive banasakte hai...

DOM structure hame documents ki attributes, element, or content ko navigate or manipulate karne ki facility deta hai using JavaScript programming language.

Q2) By the help of programming explain DOM and make a diagram of DOM structure ?

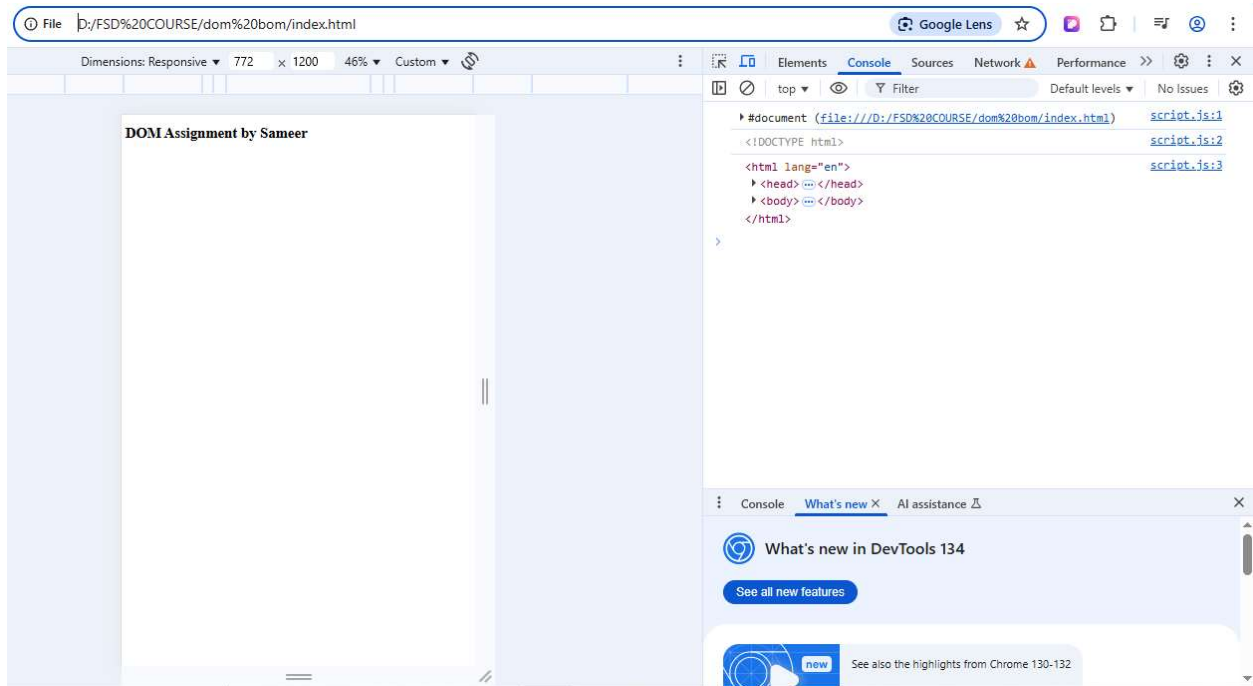

Is me phle hm index.html ki file banae gae then us me kam kare gae then script.js ki file banae gae us file ko HTML ky sath attached kare gae using script src ky through then script.js ki file me DOM ky hisab se code console kare gae or usko web ky inspect option me jakar access kare gae.

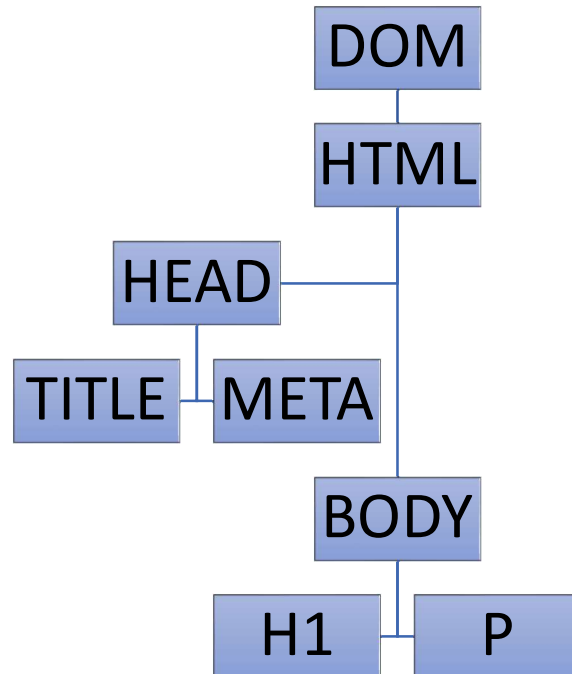

JS file me agar hm documents ko console kare gae to pura document access hoga is hi tarah document ky first child ko access kare gae to DOCTYPE HTML show hoga is hi tarah document ko document element ko access kare gae to wo element ki coding show kare ga. Is me hm apne mutabiq cheze access karsakta hai.

```
index.html > html > head > script
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>Document</title>
7      <script src="script.js"></script>
8  </head>
9  <body>
10     <h1>DOM Assignment by Sameer</h1>
11 </body>
12 </html>
```

```
JS script.js
1 console.log(document)
2 console.log(document.firstChild)
3 console.log(document.documentElement)
```

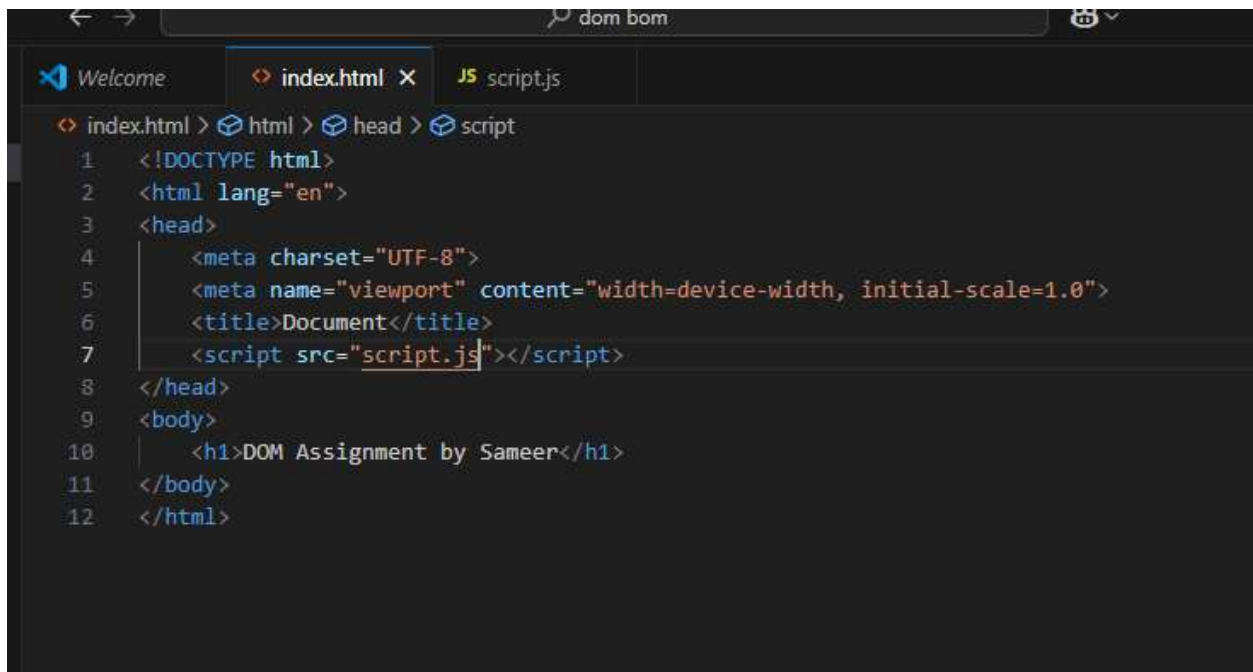

Q3) Explain BOM ?

Browser object model (BOM) web browser ko interact karta hai using JavaScript. Jis se hm JavaScript ko use karte whe web browser ky behavior ko control karskata hai or components ko manipulate karskata hai. Ye method browser ky method or properties ko access karne ki permission deta hai. Jisse developers ko browser ky behavior ko or components ko manipulate karke browser ko control karskata hai. Ye bhi ek programming interface hai. BOM ek range of properties or method provide karte hai Jo developer ko browser ky stah interact or uske behavior ko control Karne ki facility dete ahi. BOM ky zarie developer ek dynamic or interactive web application bana sakte ahi. Jis ky components ko or browsers ek stah integrate hotw hai..

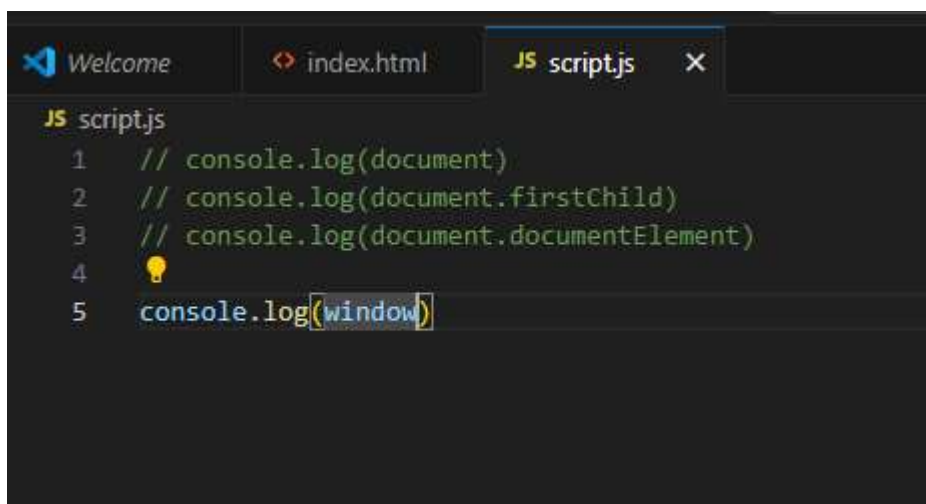

Q4) By the help of programming explain BOM and 3 steps of BOM?

Is me phle hm index.html ki file banae gae then us me kam kare gae then script.js ki file banae gae us file ko html ky sath attached kare gae using script src ky through then script.js ki file me BOM ky hisab se code console kare gae or window console kare gae or usko web ky inspect option me jakar access kare gae. BOM me screen jo hai user ki screen ki details show kare ga or navigator browser ki capabilities ky hawale se info provide karta hai. Location current url ko manipulate karne ki facility deta hai.

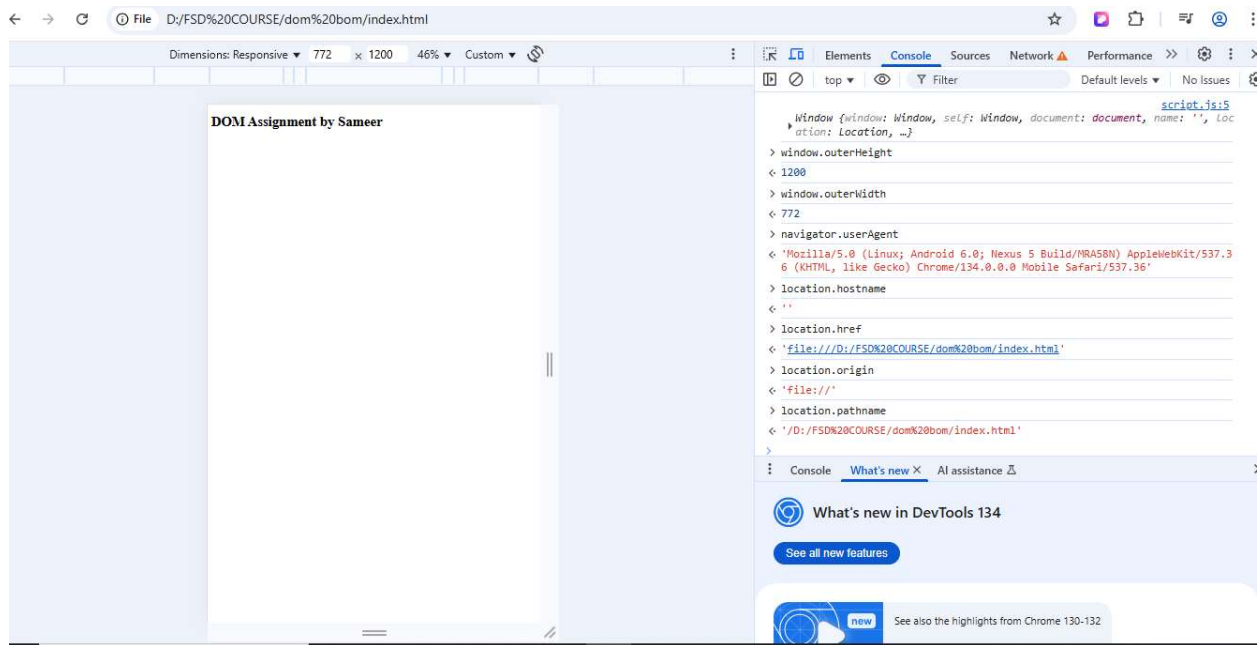

The screenshot shows the Visual Studio Code editor with a file explorer on the left and a code editor on the right. The file explorer shows a project named 'dom bom' with two files: 'index.html' and 'script.js'. The 'index.html' file is selected, and its content is displayed in the code editor. The code is an HTML document with a doctype, html, head, and body sections. The head section contains meta tags for charset, viewport, and title, and a script tag for 'script.js'. The body section contains an h1 tag with the text 'DOM Assignment by Sameer'.

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7   <script src="script.js"></script>
8 </head>
9 <body>
10  <h1>DOM Assignment by Sameer</h1>
11 </body>
12 </html>
```

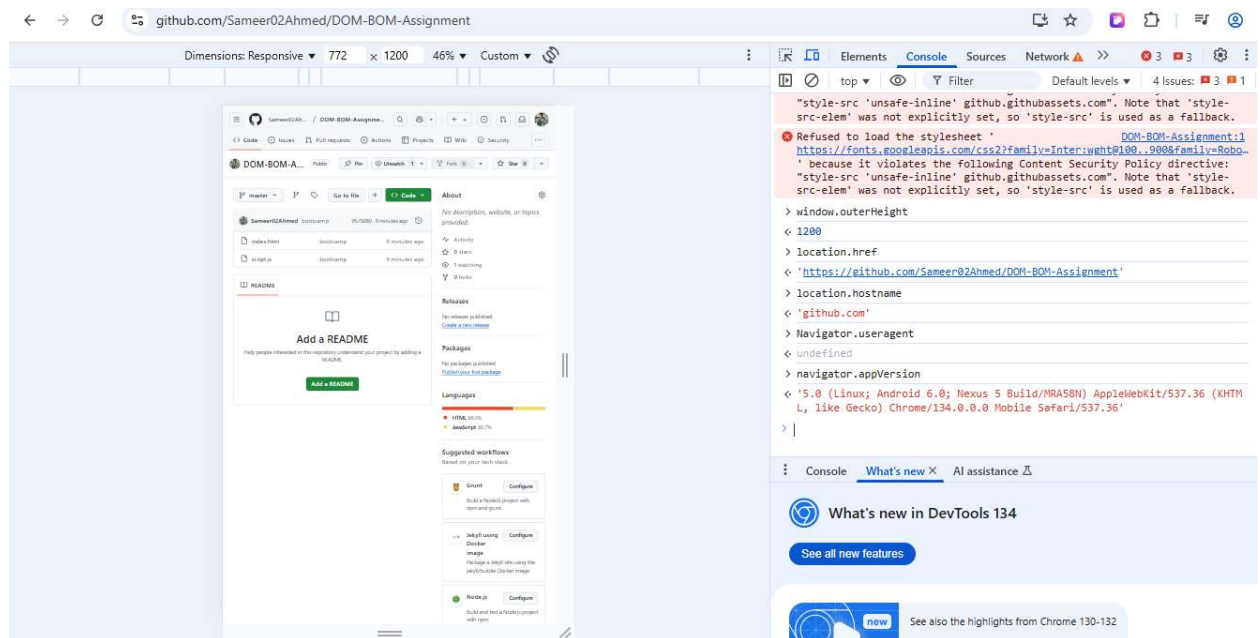

The screenshot shows the Visual Studio Code editor with the 'script.js' file selected. The code is a JavaScript file with five lines. The first three lines are comments: '// console.log(document)', '// console.log(document.firstChild)', and '// console.log(document.documentElement)'. The fourth line is a lightbulb icon, indicating a suggestion or error. The fifth line is 'console.log(window)'.

```
1 // console.log(document)
2 // console.log(document.firstChild)
3 // console.log(document.documentElement)
4 
5 console.log(window)
```
